

PALLETS OR
CARTONS

LIFO / FIFO

OPTIMISED SPACE

AR LIVE STORAGE® LIVE STORAGE

- ▶ Two types of Live Storage solutions are available: Pallet Live storage and Carton Flow storage. This system is recommended for warehouses where both stock turnover control and space saving are critical.

PALLET LIVE STORAGE

High-density system ideal to store pallets of the same type. This compact structure incorporates slightly inclined roller beds on which unit loads slide.

There are two types of pallet live storage systems:

- **GRAVITY FED:** Ideal storage for FIFO (First In, First Out) systems and in cases where stock turnover control is important. The rack has a loading area (highest) and an unloading area on the opposite end of the roller beds.
- **PUSH BACK:** Ideal storage for LIFO (Last In, First Out) systems and in cases where the amount of SKUs prevails over the volume of each SKU (limited number of pallets deep). The rack has only one loading/unloading area.

CARTON FLOW STORAGE

Carton Flow racking is a high-density system for storing cartons or light products. Unit loads slide on slightly inclined wheel carriers at the different lane levels. Wheel carriers can be easily adapted in the cross aisle direction to accommodate different unit loads.
